## **Multi Licenses**

# Introduction

Multi licenses allow running Reason on multiple computers, connected over a local area network, e.g. in a school, company or institution. This document describes how to set up and use Reason using a multi license.

As always, you will find additional information, tips and useful downloads on our web site, [www.reasonstudios.com](http://www.reasonstudios.com).

Thank you for choosing Reason!

The Reason Studios Team

## Definitions

The multi license system introduces the following concepts to Reason:

- **A site is a school or institution that owns a multi license.**
- **A location is a classroom, building or similar, where all computers are on the same Local Area Network.**
- **A site account is an account at the Reason Studios web site, where the account owner is a site, not a person.**
- **A site's Representative is the person working at a site that is responsible for the Reason licenses and handles the site account.**
- **A license is the right to run Reason.**

A license can contain a number of seats - each seat is the permission to run the program on one computer. If a site owns a Reason license with 10 seats, it can run the program on ten computers at the same time, over the same local network.

## Setting up a multi license

### What you need:

- **An account at Reason Studios.**  
This can be an existing account, or you can create a new account at the Reason Studios web site.
- ! **Note that this account will be automatically converted to a site account when you register a multi user license.**
- **A Representative for your site.**
- **An official e-mail address for the site (used for confirmation e-mails etc).**
- **A personal e-mail address for the Representative (used for activation and additional communication).**
- **The Reason application (version 6.5 or higher).**  
This can be downloaded from [www.reasonstudios.com](http://www.reasonstudios.com).
- ! **Reason version 6.5 and higher includes Authorizer version 2, which is required for setting up and using the multi licenses.**
- **A Propellerhead/Reason Studios Ignition Key.**
- **Your license number(s) and registration code(s).**

Educational multi license versions of Reason come in packages for 5 or 10 users. Each package includes a Propellerhead/Reason Studios Ignition Key and license numbers and registration codes. Each of the license numbers is valid for 5 seats, i.e. a 10 User Pack contains two license numbers and two registration codes. You only need to have one single Propellerhead/Reason Studios Ignition Key for the entire site, so if you buy two 10 User Packs you only have to use one of the keys.

So, to run Reason on a site with 20 seats, you would have four sets of 5-seat license numbers and registration codes.

# Registering and authorizing

The Reason multi license system is based on a number of computers running Reason or and communicating with a single Ignition Key over a local area network (LAN). This single key is typically inserted in the teacher's computer, or in a server, and must be authorized with all licenses.

**! Although Reason supports computer authorization (“Virtual Ignition Key”), this function is not available for multi licenses. A physical Ignition Key is required.**

To register your licenses and authorize your Ignition Key, proceed as follows:

- 1. If you don't have an account on Propellerhead already, create one at <https://www.reasonstudios.com/account/signup>.**
- 2. Download and install the Authorizer application at <https://www.reasonstudios.com/download-authorizer/>.**  
The Authorizer application is required for handling the communication between Reason and the authorization server.
- 3. Download and install the CodeMeter application at <https://www.reasonstudios.com/download-codemeter/>.**  
The Codemeter application is necessary to be able to authorize your Ignition Key USB stick.
- 4. Insert the Ignition Key into a free USB port on your computer.**
- 5. Enter your user name and password and log in on your Reason Studios account at <https://www.reasonstudios.com/account/login?next=/>.**
- 6. Select “My Products” page in the list:**

- 7. On your Products page, click the “Register New Product” button:**

Own

- 8. On the Product Registration Page, click the Reason logo.**

9. Select your purchased Reason version in the list and click Continue.

10. Enter license number, registration code and site information.

If you have several license numbers and registration codes, enter one of these pairs. When you have entered the license number this will be automatically recognized as a multi license, and ask you to enter site information. When you have filled out the form, click the “Register” button.

11. Go to your “Products” page, locate your Reason version in the list and click “Show Details”:

# Products

Applications   Rack Extensions   ReFills

Reason  
Version 8

License number: RSN800

[\[Manage license\]](#)

[Hide details...](#)

12. Click “Manage License”:

# Products

Applications   Rack Extensions   ReFills

Reason  
Version 8

License number: RSN800

[\[Manage license\]](#)

[Hide details...](#)

The Authorizer application launches.

13. On the Manage License page, click the “Write License” button next to the Ignition Key picture.

Ignition Key

(Fredrik Hylvander)

[WRITE LICENSE](#)

Lets you use Reason 8 on this Ignition Key without an inte

Now, the license is written to the connected Propellerhead Ignition Key.

14. When the write process is finished, repeat steps 7-13 for each of the remaining multi licenses in the package (if any).

! It's important that you write all license numbers to the Ignition Key, one by one, in order to get the full number of multi license seats.

When you have written the last license to the Ignition Key, it contains your complete multi license.

## Additional installations

As always, you need to install Reason on all seat computers, i.e. all computers that should run the programs using the multi license.

**! For more information about installation and setup of the Reason program, please refer to the Reason Installation Manual pdf.**

The Ignition Key holding the multi licenses should be connected to a secured computer, i.e a teacher's machine, for example. The computer must be accessible on the same local area network as the seat computers.

**! All computers (secured computer and seat computers) must also have the CodeMeter drivers and framework installed. CodeMeter can be downloaded and installed from <https://www.reasonstudios.com/download-codemeter/>.**

## Enabling the network server feature

The computer where your Ignition Key is connected should work as a network server for the seat computers running Reason. For this, you need to enable the network server feature in the CodeMeter software:

- 1. On the computer with the Ignition Key, open a web browser of your choice.**
- 2. Go to the CodeMeter WebAdmin URL - <http://localhost:22350/> (If this page is not accessible the CodeMeter daemon is not running or there is a firewall blocking the page.)**
- 3. Select the Configuration tab and then click the Server tab.**
- 4. Click the "Run Network Server" checkbox to activate the feature.**
- 5. Make sure the Bind Address pop-up menu is set to an interface accessible by the seat computers.**  
"All (Default)" is almost always the correct choice.
- 6. Click the "Apply" button.**
- 7. If you changed the Bind Address setting in step 5, you need to restart CodeMeter.**  
Under macOS, open System Preferences and select CodeMeter. Click the Stop Service button, and then the Start Service button.

Under Windows, launch the CodeMeter Control Center application from the Start menu. Select "Stop CodeMeter Service" from the Process menu, then "Start CodeMeter Service".

## The Server Search List

Normally, a Reason seat computer will automatically access any CodeMeter server available on the local area network. If you find that seat computers cannot access the CodeMeter server (e.g. because they are in different sub-nets), you can specify the address of the CodeMeter server for each seat computer. This is done in the following way:

- 1. On the seat computer, open a web browser and go to the CodeMeter WebAdmin URL - <http://localhost:22350/>**
- 2. Select the Configuration tab.**
- 3. Click the Add button under the Server Search List.**
- 4. Enter the DNS name or the IP address of the desired Codemeter server and click OK.**
- 5. Click the Apply button.**

# Multi licenses in use

When Reason is launched on a seat computer, the program will detect the multi license on the local area network. The Application Authorization dialog now looks as follows:

*The Application Authorization dialog in Reason (may look a little different depending on Reason version).*

- **Click the "Run with Multi-license" button to authorize Reason using the multi license on the site.**  
Each seat computer running Reason will decrease the number of available seats on the multi license key. Eventually, there will be no available seats.  
At this point, a user trying to run Reason using the multi license will be informed that there are no more available Multi License seats. However, it is still possible to run Reason in Demo Mode.
- ! **Note that it's not possible to use any additional Rack Extensions (besides the ones included in Reason) when running with Multi License.**
